

CANADIAN KENNEL CLUB

CLUB CANIN CANADIEN

Purebred Dog Certificate of Registration
Certificat d'enregistrement de chien de race pure

Reg. No.: **PQ998651**

Name: **HILLANDALES MAGGIE MAY**

Date Issue: **JUNE 14, 2005**

Breed: **RETRIEVER (LABRADOR)**

Date of Birth: **AUGUST 10, 2004**

Litter No.: **MS845597PQ**

Colour: **YELLOW**

Tattoo Markings and/or Microchip No.: **4KU 1P RE**

Sex: **FEMALE**

Progeny: **1M 1F**

Sire's Reg'd No. & Name: **1076583 DOINDOGS JET OF KERRYBROOK CD (USA)**

Dam's Reg'd No. & Name: **MS845597 HILLANDALES SAMANTHA DRIFTWOOD**

Breeder: **OWNER AT BIRTH**

Owner at Birth: **MARK S GILLAN (0874248)**

Address: **19 LEWANN LANE**

City Prov P/C: **GRANDBAY WESTFIELD NB E5K 3G2**

Ref No.: **26165051**

Purchase Date: **MARCH 17, 2006**

Owner: **R GARY FALOON, SAINT JOHN, NB E2M 6L9**

Foreign Reg No.:

Importer:

The Canadian Kennel Club is an animal pedigree association incorporated under the Animal Pedigree Act.

Hip Evaluation Report

Report Date: 10/4/2006

 Reference #: **861731**

Radiography Date: 9/14/2006

Practice #:

Date Received: 10/2/2006

Owner:

 R. GARY FALOOD
 SUITE 1500 ONE BRUNSWICK SQUARE
 PO BOX 1324
 ST. JOHN, NEW BRUNSWICK E2L 4H8
 CANADA

PennHIP Member:

 DR. ERNIE PROWSE
 CENTRAL NOVA ANIMAL HOSPITAL

 CANADA

ANIMAL	
MAGGIE MAY	Reg. #: PQ998651
CANINE / LABRADOR RETRIEVER	Microchip:
Date of Birth: 8/10/2004 Sex: F Weight: 61 lbs. Age: 25 mo.	Tattoo: 4KU2PRE

RESULTS			
LEFT	Distraction Index (DI)	0.40	DI is greater than 0.30 with no radiographic evidence of DJD. There is an increasing risk of developing DJD as the DI increases; low risk when DI is close to 0.30, high risk when DI is close to 0.70 or above.
	Degenerative Joint Disease (DJD)	None	
	Cavitation	No	
	Other Findings	Not Applicable	
RIGHT	Distraction Index (DI)	0.48	DI is greater than 0.30 with no radiographic evidence of DJD. There is an increasing risk of developing DJD as the DI increases; low risk when DI is close to 0.30, high risk when DI is close to 0.70 or above.
	Degenerative Joint Disease (DJD)	None	
	Cavitation	No	
	Other Findings	Not Applicable	

Please note that the PennHIP DI is a measure of hip joint laxity, it does not allude to a "passing" or "failing" hip score.

LAXITY PROFILE RANKING									
The laxity profile ranking is based on the hip with the greater laxity (DI). This interpretation is based on a cross-section of 15,012 CANINE animals of the LABRADOR RETRIEVER breed. The median DI for this group is 0.48.									
Percentiles									
	90th	80th	70th	60th	50th	40th	30th	20th	10th
> 90th					Median				< 10th
↑									
The chart above indicates the ranking of your animal's passive hip laxity (DI) in relation to all CANINE animals of the LABRADOR RETRIEVER breed in our database. Your animal's hip laxity lies within the 50th percentile or median range. Breed-specific evaluations are analyzed semi-annually. Consequently, the average laxity and range of laxity for any given group will change over time.									

PennHIP does not make specific breeding recommendations. Selection of sire and dam for mating is the decision of the breeder.

NOTE: As a minimum breeding criterion, we propose that breeding stock be selected from the population of animals having hip laxity in the tighter half of the breed (to the left of the median mark on the graph). Higher selection pressure equates to more rapid expected genetic change per generation.

By implementing selection based on passive hip laxity, we expect the breed average DI over the years to move toward tighter hip configuration, meaning lower hip dysplasia susceptibility. The PennHIP database permits scientific adjustment of criteria to reflect these shifts; the average laxity and range of laxity for a particular breed will change over time.
